# **Project One Student**

#### What is Project One Student?

Project One Student is the implementation of Workday Student across the UA System. Workday Student is a student-centered platform that unifies processes associated with a student's progression from admission through graduation in a simple, cloud-based information system. This enables all UA System institutions to rely on a single source of truth with access to real-time data, using a modern, mobile-friendly interface.

### What will Workday Student replace?

Workday Student covers the same business functions as our current student information system. Administrative processes involved with Student Records, Academic Foundations, Student Finance, Financial Aid, Academic Advising, Recruiting, and Admissions will transition to Workday Student.

## How is this different from Workday now?

The Student modules will be built into the same Workday you use today - no new login needed for faculty and staff. Workday unifies Financial Management, Human Resources, Planning, and Student applications in a single platform, creating instantaneous access to data that spans multiple disciplines.

### Why are we doing this now?

Many UA System campuses have legacy systems that have reached their end of life. By bringing our institutions together onto a common student information platform, we can realize better alignment of practices, resulting in an enhanced and mobile-friendly student and faculty experience for all UA System institutions.

#### When will we make the switch?

We are currently in the architect and configure phase of our implementation, meaning institutions are configuring Workday to meet needs. Two-year institutions are slated to begin deployments of functionality in the Fall of 2023, with four-year institutions beginning to launch in Summer 2024.

### Are other universities using Workday?

Workday Student has launched at a number of institutions, with more considering it as a solution each and every day due to its student-centric and mobile-first approach.

# Key Benefits

- Improves service and experience for students
- Easy-to-use mobile app
- Simplifies and standardizes processes
- Eliminates paper where feasible
- Increases and improves self-service capability for the campus
  community
- Provides consistent information
- Enables faculty and staff to have efficient access to data in real time
- Reduces costs associated with support of multiple systems
